

AYUSAFE

Potent Antiviral & Immune Boosting Solution for Poultry

COMPOSITION:

Ayusafe is specifically designed, advanced, super refined blend of potent natural herbs:

Kalmegh
Adhatoda vasica
Curcuma longa
Azadirachta indica
Allium sativum
Tinospora cordifolia
Echinacea
Activated Zinc
Licorice

Importance of Immunity in Poultry

- Viral infections pose a serious threat to poultry industry.
- Strong immune system is crucial & important for birds as it identifies and combats foreign invaders such as bacteria, virus, fungi.
- Environmental stressors that weaken natural immunity of birds.
- To reinforce this defence mechanism, regular supplementation with immunomodulators is essential.

Importance of Natural Immunomodulators & Antiviral Phytochemicals

1. Highly effective in managing stress.
2. Enhances immunity, reduces mortality & improves overall performance.
3. Regular use prevents recurring infections.
4. Accelerates recovery during disease outbreaks.
5. Boosts antibody production post-vaccination.
6. Aids in the repair of damaged epithelial tissues.
7. Exhibits strong anti-inflammatory properties.

How AYUSAFE Helps Combat Bird Flu

- Ayusafe is an advanced antiviral and immune-boosting phytochemical solution formulated to combat avian influenza and other respiratory infections in poultry.
- It is enriched with powerful “**Energized Natural Phytochemical Compounds**” that inhibit viral replication, enhance immunity and reduces respiratory distress.

KEY BENEFITS OF AYUSAFE:

1. Strengthens the immune system by stimulating the production of T cells, B cells, macrophages, phagocytes, and immunoglobulins.
2. Inhibits viral adsorption and penetration into cells. This effectively reduces viral load in the body.
3. Acts as a potent antioxidant, neutralizes free radicals and stimulates body's natural antioxidant enzymes.
4. Helps in reducing inflammation caused by various stressors and infections.
5. Reduces respiratory diseases
6. Prevents secondary bacterial infection.

USAGE GUIDELINE

During Disease Outbreak

To be given from 1st day only to get best results.
In Water: 200ml per 1000 birds for 10 days.
Continue during infection regularly and 7 days after infection subsides:
Prevention (Program):

DOSAGE:

Chicks: 100ml per 1000 birds
Growers/Broilers: 100ml per 1000 birds
Layers/Breeders: 150ml per 1000 birds

For Best vaccine response

2 days prior to vaccine & 7 days after vaccination

Dosage: 100 ml/1000 birds.

For Prevention & during outbreak:
In feed: 500 gm/ ton of feed

PACKING : 1ltr. & 5 ltrs.
