

LYSOMAX-FORTE

The Effective Nutritional Emulsifier

It is nutritional emulsifier designed to increase digestion, absorption & bio availability of energy rich feed.

This is concentrated product with less dose.

Nutrients matrix value of Lysomax- Forte

AME matrix value for diet with different fat	
Feed fat added to diet	AME value K Cal/Kg of feed
Animal tallow	87
Crude palm oil	98
Crude rice bran oil	81
Soya crude oil	90

PACKING : 25 kg

COMPOSITION :

Consists combination of Lysophospholipids, Phospholipids and Glycolipids.

ADVANTAGES :

- Possesses significantly higher concentration of lysophosphatidylcholine
- Enhances efficient emulsification and thereby produces maximum number of smaller and stable micelles
- Enhances intestinal permeability resulting in better absorption of all the nutrients
- It has more hydrophilic ends therefore helps in better emulsification
- It improves digestibility of other nutrients also and enhances absorption of fat soluble nutrients Therefore, there is genuine need of providing biosurfactants / emulsifiers through diet to maximise the bio-availability of provided nutrients which otherwise may have gone waste due to limited production of endogenic biosurfactant.

BENEFITS :

Broilers :

- Improves weight gain and F.C.R.
- Improves immunity.
- Increases profitability.

Layers & Breeders :

- Helps in achieving proper body weight during growing period
- Reduces number of pullet eggs
- Reduces feed cost by better digestion and absorption of nutrients

DOSAGE :

MIXING DIRECTIONS :

Broilers / Layers / Chicks / Growers / Breeders :
250 gm per ton of feed.
